## Course

Foundations in Agricultural Management (free):

<https://www.guelphagriculturalmanagement.com/>

This is a fair **formula** to figure out cash rent values according to yields and commodity prices: 25% of the yield x the price of the commodity x 0.75 risk = cash rent to charge. Based on a 4-year rotation.

For example, Canola planted every 3 to 4 years: 40-bushel yield/acre (40 x 0.25 = 10 bu) x \$10.00/bu price x 0.75 risk = \$75/acre for canola
